

Cylinder Free Multi Point Locking

The Multi Point Locking market is a highly competitive market place with many 'similar' products; product differential is vital.

In embracing this theory, Winlock has focused on the next generation in multi point locking; VECTIS+ – the cylinder free multi point lock.

The patented Vectis encompasses tried and tested traditional lever technology used in mortice locks for centuries; combined with today's need for modern locking systems.

The Vectis is designed to meet the requirements of PAS 23/24 & Secured by Design.

Benefits of Vectis:

- Patented 5 lever operation eliminates the need for euro cylinder operation. No euro cylinder means the Vectis is free from cylinder manipulation, snapping and plug extraction
- Door fabrication is made easier and quicker for the installer
- All current Winlock multi-point locking variants can utilize the Vectis gearbox, signifying no routing amendments needed
- Vectis can be keyed alike, allowing a Multi point lock on the front door and a mortice lock on the back door both using the same key
- No need to purchase or stock various euro cylinder variants

Product Specification.

Vectis is available in the following backsets:

- 35mm Backset - with centre hook and deadbolt option
- 35mm Slave unit
- 45mm backset - with deadbolt option only

All gearboxes are supplied with 3 x brass keys

Choice of handle solutions available:

- Universal insert

Internal thumb turn adaptor available

No Euro Cylinder, so.....

- No bumping
- No breaking / Snapping
- No plug extraction
